GitHub · LinkedIn · Portfolio

PROFILE

Software engineer with 4+ years building and operating production systems. I design and own backend services in Python and FastAPI, with event-driven communication on NATS. I have object-oriented experience in C# and TypeScript, and I take features from technical design through testing, deployment and monitoring. I work daily with LLM-based tooling (Claude Code, MCP) and want to build AI-powered features at scale.

EXPERIENCE

Abra · Tel Aviv

Software Engineer

Feb 2026 – Present

- Own backend features end to end in **Python** and **FastAPI**, from technical design through deployment and monitoring, with **Alembic** schema migrations and **NATS** for event-driven communication between services.
- Design and implement production APIs independently, writing tests and going through code review, and integrate them with a **React / Redux** frontend where needed.
- Use AI-assisted workflows (Claude Code, MCP integrations, custom skills) to speed up implementation and testing without lowering the review bar.

Junior Full-Stack Developer

Jun 2024 – Feb 2026

- Created an automated testing framework in **C# (.NET 6)** using the Page Object Model, with **Playwright**, **Docker** and **WebSocket**. Applied object-oriented design to keep tests reusable and maintainable.
- Delivered full-stack features with **NestJS**, **React** and **Tailwind**, covering backend services and client components.
- Built a **React**, **Redux Toolkit**, **SCSS** application that renders client-facing layouts from server-defined configuration.

Fireblocks · Tel Aviv

Full-Stack Engineer, Support Tools

Jan 2022 – Jun 2024

- Monitored production system state and logs in **Grafana**, **Elastic** and **Coralogix** to diagnose and resolve end-user issues.
- Queried production data with **SQL** to diagnose and close support cases.
- Built and extended internal support tools with **React**, **Node.js**, **TypeScript**, **Prisma** and **trPC**.

American Medical Laboratories

Research Assistant

Sep 2017 – Dec 2020

- Developed a **C#** application that generated COVID-19 result PDFs from patient test data.

PROJECTS

DevOps Bootcamp

- Built production-grade CI/CD pipelines with **Docker**, **Kubernetes (AWS EKS)**, **Terraform** and **Ansible**, with **Prometheus** monitoring and **Python / Flask** services.

Sport Court Rental

- Mobile app for reserving sports courts, built with **Node**, **React Native**, **Redux** and **MongoDB**, with real-time rental notifications.

SKILLS

Languages & design

Python, C#, TypeScript, JavaScript, SQL, Object-Oriented Design, Design Patterns, Clean Code

Backend & systems

FastAPI, NATS (event-driven), Alembic, Node.js, NestJS, Prisma, trRPC

Operations & quality

Testing (Playwright, Page Object Model), CI/CD, Docker, Grafana, Elastic, Coralogix, Git

Frontend

React, Redux Toolkit, Zustand, Tailwind, SCSS, HTML, CSS

EDUCATION

BSc, Computer Science

Tel Aviv-Jaffa College
Nov 2018 – Jan 2022

SERVICE

Artillery Corps, IDF

Full combat service
Jul 2014 – Jul 2017

LANGUAGES

Hebrew (native)
English (native)
